DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims29, 31, 33-34, 36-44, 46,48-49 and 51-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mountsier et al (US 5810933) in view of Moslehi (US 5936829).

Mountsier et al disclose an electrostatic chuck (Fig 1 and Col 1 lines 39-54), comprising a dielectric layer (Fig 1-4), chucking electrode (Fig 1-2), temperature control (Col 1 line 41 and Col 8 lines 40-49), chucking power source (Fig 1-14), chucking surface concaves for heat exchange gas (Fig 11b), under pressure (Col 7 line 48), gas distribution concave (Fig 11b –74) which are deeper than heat exchange concaves (Fig 11b), gas distribution concaves formed in coaxial with the center of the stage (Fig 7), the depth of heat exchange concaves being below 40 μm (Col 10 line 65) and the depth of gas diffusion concaves being 700 μm (Col 13 line 14), the contact area being 10% (Col 9 line 42), main body cooling cavity (Fig 3) and a heat conducting layer between dielectric and main body for cooling (Fig 5-54).

Area of gas diffusion concaves is indirectly disclosed to be at least 5% (on a wafer of 200 mm diameter (Col 11 line 37) and diffusion concave width of 0.5 to 2.5 mm (Col 13 line 16) and plan view of Fig 15a to 19 b will yield an estimate of at least 5%).

*Application/Control Number: 09/879,934

Art Unit: 1763

Mountsier et al disclose radial and circumferential gas diffusion concave inside an outer circumferential concave (Fig 17 a) but do not disclose a plurality of circumferential concaves containing gas inlet connected at the crossing of circumferential and radial concave.

Moslehi discloses another chuck and discloses a plurality of circumferential concaves (Fig 3) containing gas inlet connected at the crossing of circumferential and radial concave (Fig 3-74).

Since additional circumferential concaves is an alternative and equivalent way for distributing heat transfer gas and helps in obtaining better uniformity closer to center, it would have been obvious for one of ordinary skill in the art at the time of invention to have additional circumferential cancaves and have heat transfer gas inlet connected at the cross of radial and circumferential concaves.

3. Claims 30, 32, 35, 45, 47 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mountsier et al (US 5810933) in view of Moslehi (US 5936829) as applied to claim Claims 29, 31, 33-34, 36-44, 46 and 48-49 and further in view of Sexton et al (US 6377437).

Mountsier et al do not disclose lift pin provided in gas introduction channel.

Sexton et al disclose cooling gas flowing through lift pin holes (Abstract and Fig 9-46).

Application/Control Number: 09/879,934

Art Unit: 1763

Therefore it would have been obvious for one with ordinary skill in the art at the time

Page 4

invention was made to use gas channel hole for dual purpose of lift pin hole as well as cooling

gas channel to make the design simpler and economical.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Yamada et al (5946183 - Fig 7) discloses circumferential and radial concaves for heat

transfer gas distribution.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Ram N Kackar whose telephone number is 703 305 3996. The

examiner can normally be reached on M-F 8:00 A.M to 5:P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Gregory Mills can be reached on 703 308 1633. The fax phone numbers for the

organization where this application or proceeding is assigned are 703 872 9310 for regular

communications and 703 872 9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703 308 0661.
